

What is Claimed is:

1. A medical instrument washer comprising:

a rack drawably fitted in a washing tub, for setting washing objects thereon;

a flow passage having one end located on a rear side of the washing tub for supplying washing water to the rear side; and,

a washing duct on the rack having a washing water inlet in rear part thereof so as to be detachably connected to one end of the flow passage as the rack is drawn/pushed in.

2. A medical instrument washer as claimed in claim 1, wherein the washing tub includes an opening provided in a front part thereof for drawing/pushing in the rack, with a door in the opening so that the washing water inlet in the washing duct is pressed onto the one end of the flow passage to make the washing water inlet engaged with the one end by a thrust generated when the rack moves backward when the door is closed.

3. A medical instrument washer as claimed in claim 1, wherein the washing water inlet includes a rubber member fitted around the washing water inlet for a better sealing when the washing water inlet is connected to the one end of the flow passage.

4. A medical instrument washer as claimed in claim 1, wherein the washing duct further includes an injector nozzle on an upper surface thereof for exclusive washing of endoscopes.

5. A medical instrument washer as claimed in claim 1, wherein the washing duct includes an upper spray arm further connected to a bottom of the washing duct for spraying

washing water toward the rack.

6. A medical instrument washer as claimed in claim 1, wherein the flow passage includes one end located at a rear side of the washing tub, and the other end connected to a washing pump fitted below the washing tub.
